

Main nav

/hub/* -- this is where our quick tools live, a route for each shared component available

Agenda is fine

similar to the hub, think of this as a curated place for engagement shared components

Community is fine

Profile is mostly fine

/hub/contacts -- shows the contacts shared components

Announcements
Messages
Requests
Leads

What we will want to make sure is that the routes /contacts /notes

/hub/message -- shows the messages component

etc, etc, for all our quick tools-- contacts, notes, leads, everything we have now. When we add a new quick tool, we just create the route and use the shared component

so we have the /engage/[TOOL] and it hosts the corresponding shared component. This way navigation can stay in their stacks like they are meant to

the collect lead and show QR buttons all trigger a shared component or the same /[STACK]/[TOOL] pattern with the corresponding shared component

Our Shared Components -- so far the list will evolve but the pattern will remain
